The transmission tariff

The transmission tariff is determined by a decision from the French regulator CRE (Commission de Régulation de l’Energie). For one point, and a type of subscription, you may calculate the transmission costs, on the basis of transmission tariffs.

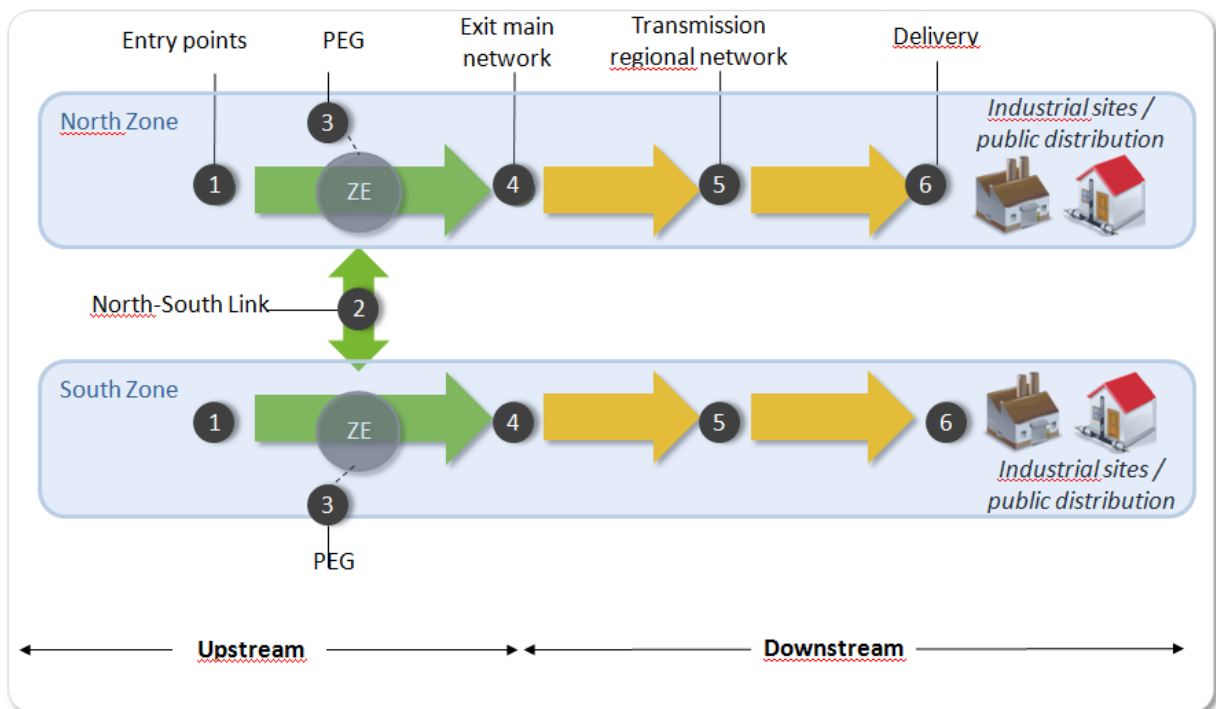

Principles

The transmission tariff applies from April 1st 2016 : it comes into force with the application of the [CRE decision of December 10th 2015](#), relating to the utilization of natural gas transportation networks.

The tariff terms vary according to the subscription length. There is a tariff term for each contractual point.

Tariff terms described below are in expressed EUR/MWh/D for subscriptions, and in EUR/MWh for quantities terms.
