

The new process test service on consumer delivery points (PLC)

You are about to start new tests to launch a new process and have no knowledge of the exact days of use of the additional daily capacity you are going to need during testing? GRTgaz offers you an opportunity to subscribe to a service to help you during the test phases.

Principles

Once technical feasibility has been checked by GRTgaz, thanks to this service you benefit from a package that allows you to subscribe daily delivery capacity during a fixed period of 10 days maximum (consecutive or not) in one given month. Throughout this month, the daily capacity subscription must be the same every day you use this 10-day package.

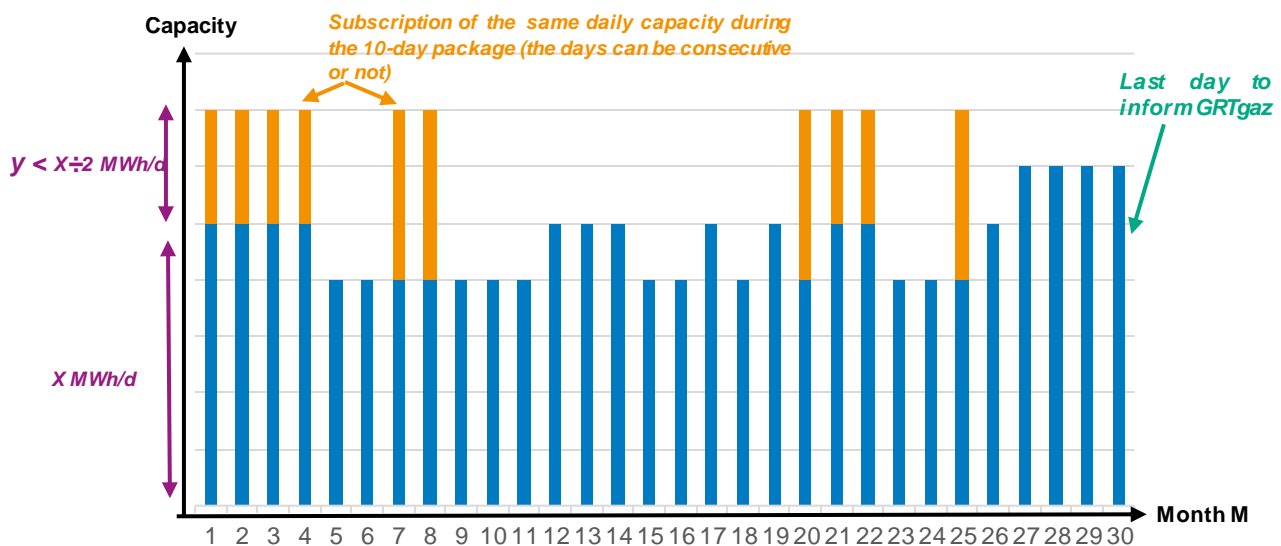

This service is subject to the signing of a **specific agreement** between the shipper and GRTgaz.

Prerequisites for the setting up of the service

There are two specific cases:

- The shipper operating on the site has reserved a monthly capacity superior or equal to half the capacity subscribed as part of this service, for at least two consecutive month
- The shipper operating on the site has requested an increase in annual capacity superior or equal to half the capacity subscribed as part of this service

In both cases, the shipper undertakes to communicate to GRTgaz at the latest on the last day of month M, the days when daily consumption has taken place under the terms of the fixed period contract for month M.

Tariff

The cost for the fixed duration is equal to 2 days' daily capacity for the month when the fixed period is in effect, plus the price of the daily capacity for the days of use.

Validity period of the contract

It lasts 1 year, except if the consumer changes the shipper when the contract is operating: in this case, the contract is terminated.
