

Substitution offer

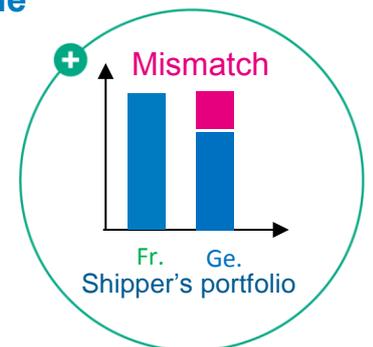

You don't have the same level subscribed on a PIR on both sides of the border and the unbundled capacity that you need isn't available for sale?

The substitution offer is perfect for you!

More flexibility: a solution to the "capacity mismatch issue"

CAM Network Cod commands to maximize bundled capacities which are marketed. But sometimes, unbundled firm capacity isn't available for sale on the other side of the French border.

When there is a capacity mismatch issue between both sides of a border, the capacity you subscribed on the French side cannot be used entirely.

A brief description of the substitution

Thanks to the substitution offer, you can substitute the bundled capacity you have purchased during annual, quarterly or monthly auctions with the unbundled capacity you previously subscribed.

The substitution applies to all CAM points: Taisnières B, Virtualys, Obergailbach (Entry) on annual, quarterly and monthly time steps.

Substitution

How to proceed?

- 1. Auction:** You take part in the auction on a PIR and you subscribe bundled capacity.
- 2. Request:** Within 5 working days, you ask the substitution on this PIR to GRTgaz (email template appended to the transmission contract) over the new capacity period. The capacity you substitute mustn't exceed the level of unbundled capacity in portfolio on this point and the level of capacity you subscribed during the auction.
- 3. Confirmation:** After checking these elements, GRTgaz confirms you the substitution by email: the unbundled capacity in your portfolio is substituted with the new one and becomes bundled. GRTgaz markets the amount of substituted capacity.
- 4. Invoicing:** The substitution offer is free: you only pay the auction premium when it is required. If the new capacity maturity is lower than the short term multiplier, you don't pay any extra.
